DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12 May 2004 has been entered.

Response to Amendment

Examiner would like to thank applicant, who have provided a clean <u>Amended</u> <u>claims</u> 1, 5, 6 and the new claims 19-30, which now require the following restriction due to different inventions clearly addressing in these claims.

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

- A. Claims 1-6, 19-21 and 27-29 drawn to the light diffusing plate with anti-reflective layer formed on a surface of the light shield layer other than a surface formed on the light shield layer and covering the other area than the plurality of light exist areas
- B. Claims 22-26 and 30 drawn to the light diffusing plate with plurality of protrusion provided on a side of another surface of the lens substrate reverse

Art Unit: 2871

to the plurality of microlenses, each end surface of the plurality of protrusions becoming each of the plurality of light exist areas and a light shield layer formed on the another surface of the lens substrate and embedded among the plurality of protrusion [a feature "a light diffusing plate with a plurality of protrusions" is not originally elected].

In the species A, Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 5 and 21, drawn to a liquid crystal display apparatus comprising liquid crystal panel and a backlight section for causing collimated light to be incident on the liquid crystal display panel, classified in class 349, subclass 95.
- II. Claim 6, drawn to a rear projection apparatus, classified in class349, subclass 5.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claim 6 is the evidence claim showing that a rear projection apparatus

Art Unit: 2871

does not rely upon the specific details of a liquid crystal display apparatus. The subcombination has separate utility such as rear projection engine, screen and Fresnel lens.

If Species A is elected, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species and inventions for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Currently, claims 1 and 27 are generic claim of species A.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and <u>a</u> listing of all claims and any drawings readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the

Art Unit: 2871

inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to HOAN C. NGUYEN whose telephone number is (571) 272-2296. The examiner can normally be reached on MONDAY-THURSDAY:8:00AM-4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kim H Robert can be reached on (571) 272-2293. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
